

IN THE CLAIMS

Claim 1 (currently amended): A method for dart games, said method comprising:

providing a dart board, ~~and~~

providing an attaching device,

providing a housing and rotatably and adjustably attaching said housing to said attaching device, to allow said housing to be rotated and adjusted relative to said attaching device, and

providing and attaching at least one reference line generating device to said housing, said at least one reference line generating device including a light generating device to generate at least one toe line for said dart board, said at least one reference line generating device being rotatable in concert with said housing, to allow said at least one toe line generated by said light generating device to be rotated and adjusted relative to said attaching device and said dart board.

Claims 2, 3 (canceled).

Claim 4 (currently amended): The method as claimed in claim ~~2~~ 1 further comprising providing a circuit board to support said light generating device.

Claim 5 (currently amended): The method as claimed in claim ~~3~~ 1 further comprising providing a casing in front of said housing to receive said light generating device.

Claim 6 (original): The method as claimed in claim 5 further comprising providing and attaching a lens in said casing and disposing in front of said light generating device.

Claim 7 (original): The method as claimed in claim 6 further comprising providing a passage in said casing to receive said lens therein.

Claim 8 (currently amended): The method as claimed in claim 1 ~~further comprising providing an~~, wherein said attaching device is provided for attaching at least one reference line generating device to said dart board.

Claim 9 (original): The method as claimed in claim 8, wherein said attaching device provides at least one arm having a first end attached to said dart board, and a second end for supporting said at least one reference line generating device.

Claim 10 (original): The method as claimed in claim 9, wherein said attaching device provides an extension laterally extended from said first end of said at least one arm, and secured to said dart board with at least one fastener.

Claim 11 (currently amended): The method as claimed in claim 1 ~~further comprising providing an~~, wherein said attaching device is provided for attaching at least one reference line generating device to a supporting surface.

Claim 12 (original): The method as claimed in claim 11, wherein said attaching device provides at least one arm having a first end attached to the supporting surface, and a second end for supporting said at least one reference line generating device.
